2.BURNDOWN CHART

3.REFLECTION QUESTIONS

1. Did your estimations reflect the actual effort?

Answer:

Yes, the estimations reasonably reflected the effort. The six stories in Sprint 3 were estimated using Fibonacci Story Points based on their complexity. The sprint had **24 Story Points**, and all 24 points were completed. The points represent relative effort, not exact hours.

2. Was your backlog well-prioritized?

Answer:

Yes, the backlog was prioritized based on the importance of **patient privacy and health record access**. Important features like requesting, viewing, and restricting health records were given higher priority. This helped us select the important stories for the sprint.

3. How did your simulated sprint align with your plan?

Answer:

The sprint aligned well with our plan. Sprint 3 focused on consent visibility and controlled health record access. We selected six stories worth 24 Story Points, and all of them were completed successfully.

4. What insights did the Burndown Chart give about your team's capacity?

Answer:

The Burndown Chart showed that we were able to complete all 24 Story Points planned for Sprint 3. The remaining work reduced to zero, showing that the selected workload was achievable within the sprint.
